The Committee invited Cary Krosinsky, a Vice President at Trucost, who teaches a course on sustainable investing at the Center for Environmental Research and Conservation (CERC) at Columbia University’s Earth Institute, to speak about sustainable investing. Cary explained that sustainable investing is an investment philosophy that explicitly considers future environmental and social trends in financial decision making, in order to provide the best risk-adjusted and opportunity-directed results for investors. It is different than socially responsible investing in that it is a proactive and positive approach, rather than a reactive and divestment approach to investing. Cary spoke about his two-semester course at CERC, Sustainable Investing I & II, where students actively participate in the building of a sustainable portfolio. Cary explained that Trucost maintains the world’s most comprehensive database, reflecting over 750 environmental impact categories of 4,500+ public companies globally, and produces cutting edge research on environmental issues. He cited the 2009 Yale Endowment Report, which holds three pages on Yale University’s sustainable investing efforts or “Green Ventures”. Columbia University does not produce such a report.

There being no further business, the meeting was adjourned at 7:38
p.m.
